Week- 3 - 01:

--Coding-C-Language Features-Optional.

ROLL NO.: 240801112

Name: HARSHA G

Q1) Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false.

Example: If 698 and 768 are given, program should print true as they both end with 8.

Sample Input 1

25 53

Sample Output 1

false

Sample Input 2

27 77

Sample Output 2

true

```c
#include <stdio.h>

int main(){
    int num1 , num2;
    scanf("%d %d",&num1,&num2);
    int lastDigit1 = num1%10;
    int lastdigit2 = num2%10;
    if(lastDigit1 == lastdigit2){
        printf("true\n");
    }
    else{
        printf("false\n");
    }
    return 0;
}
```

OUTPUT:

	Input	Expected	Got	
✓	25 53	false	false	✓
✓	27 77	true	true	✓

Passed all tests! ✓

Q2) In this challenge, we're getting started with conditional statements.

Task

Given an integer, n, perform the following conditional actions:

• If n is odd, print Weird

• If n is even and in the inclusive range of 2 to 5, print Not Weird

• If n is even and in the inclusive range of 6 to 20, print Weird

• If n is even and greater than 20, print Not Weird

Complete the stub code provided in your editor to print whether or not n is weird.

Input Format

A single line containing a positive integer, n.

Constraints

• $1 < n < 100$

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Weird

CODE:

```c
#include <stdio.h>

int main(){
    int n;
    scanf("%d",&n);
    if(n%2!=0){
        printf("Weird\n");

    }else{
        if(n>=2&&n<=5){
        printf("Not Weird\n");
        }else if (n>=66&&n<=20){
        printf("Weird\n");
    }else if (n>20){
        printf("Not Weird\n");
    }
}
    return 0;
}
```

OUTPUT:

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Passed all tests! ✓

Q3) Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third.

For example, 3, 5 and 4 form a Pythagorean triple, since 3*3 + 4*4 = 25 = 5*5

You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters.

Sample Input 1

3

5

4

Sample Output 1

Yes

CODE:

```c
#include <stdio.h>

int main(){
    int a,b,c;
    scanf("%d %d %d",&a,&b,&c);
    if((a*a+b*b==c*c)||(a*a+c*c==b*b)||(b*b+c==a*a)){
        printf("yes\n");
    }else{
        printf("no\n");

    }
    return 0;

 }
```

OUTPUT:

	Input	Expected	Got	
✓	3 5 4	yes	yes	✓
✓	5 8 2	no	no	✓

Passed all tests! ✓
